Multidisciplinary Consultancy Services

Formula 1 Grandstand Roof, Greater Noida, UP  
40m Cantilever with minimum steel

CONSTRUCTURE is a multidisciplinary engineering and design consultancy providing a complete range of analysis and design services, backed by expertise in allied fields such as management, finance and environmental assessment. We are committed to providing project-specific and environmentally sensitive solutions to achieve a synergy between space, structure and construction.

# Introduction

We, at **CONSTRUCTURE**, recognise the multi-disciplinary needs of today's large scale projects and bring together a team of experts in varying fields to offer our clients a range of linked services under one roof.

Our expertise and experience in multi-storey buildings, Highways, bridges, parking structures, large span structures, underground structures, water retaining structures, pre-cast and cast-in-situ construction, industrial structures, space structures, cable-supported structures, tensile membrane structures, aluminium structures, curtain walls and glazing enables us to accurately gauge the client's requirements and provide responsive, client oriented and relevant solutions

Our think-tank team of engineers, associates, resource personnel and other professionals work together with organisations like IIT Delhi, using interdisciplinary software and an interactive design process, to arrive at tailor made design solutions drawn from preliminary investigation reports, cost studies, feasibility studies, system analyses and client requirements.

## Methodology

On receiving a project, we first identify the key team of experts from our in-house team, specialist consultants and others as required.

This team follows the project from inception to completion with key inputs and responsibilities clearly defined.

We believe in providing a comprehensive service based on three principles:

### Knowledge

Based on a range of experts from different fields

A continuous process of self improvement of our staff and associates

Knowledge of international best practice standards and guidelines

Use of cutting edge analytical and design software and techniques

### Quality

Our primary goal is to maintain the highest quality standards by:

Optimizing all our designs for efficiency and economy

Maintaining clarity of purpose throughout the design, drawing and implementation process

Deploying the highest standards to all our work

Implementing a multi-layered review system where all work is continuously reviewed by independent associates

## Innovation

Each project is considered anew, and approached as a fresh challenge

Existing solutions form a benchmark which we endeavor to improve at all levels

High-tech tools provide the means to test and evaluate alternative solutions

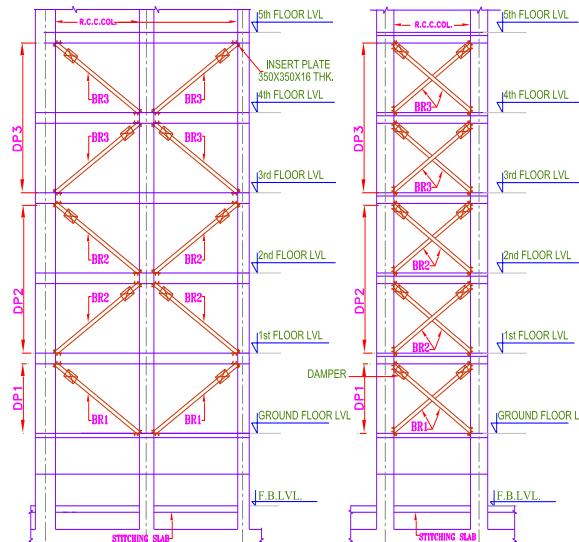

Several solutions are explored for every design challenge, evaluated on a number of criteria including suitability, efficiency, cost, sustainability and only the most appropriate solution is taken forward

Ultimately we aim to add value to the project with significant reductions in capital and recurring costs

The projects we deliver are often unique, sustainable, efficient and client-centered

**Friction Damper has been successfully implemented to structure for dissipating seismic energy.**

# Personal Profile

## Hariom Gera

B.E.(Civil),M.I.T.S., Gwalior,  
M.Tech. (Structure), IIT Delhi,  
MIAStructE, MINSDAG  
Managing Director, Principal Engineer

Hariom has 21 years of experience in Structure Engineering, Management & Finance. He is well versed with design in all kinds of multistory buildings i.e. RCC & Steel, Bridge design, metro stations, large span structures, industrial structure, curtain walls and pre-stressed tensile membrane structure. After having 9 years of experience He has started his consultancy.

He is engaged with architectural planning, laboratory testing, economic cost analysis. He is providing unique & cost effective solutions to client.

Member of Indian association of structure engineers

He work together with organizations like IIT Delhi, using interdisciplinary software and an interactive design process, to arrive at tailor made design solutions drawn from preliminary investigation reports, cost studies, feasibility studies, system analyses and client requirements.

He boast a highly qualified team of engineers, association with the top engineering organizations of the country, a large group of associate organizations implementing geotechnical and geophysical testing, leading resource personnel, a large range of executed projects in different fields, an interactive and rigorous design process, and a commitment to innovation to achieve the highest levels of efficiency and professionalism in all that we do.

Key Project experience includes:

Indian Airlines Pilot's Group Housing (2 Blocks – 18 to 19 storey) at Mehrauli-Gurgaon Road, Gurgaon

Uniworld City (7 Blocks – 13 to 19 storey Buildings) at Gurgaon

Royal Residency,Noida

RITES Co-operative office, Gurgaon

ADB(Asian Development Bank), Chanayakpuri

Trade Square (17 storey) for M/s Ansal Housing at Ghaziabad.

Centre Point, Bhopal
